Assembly and Ceiling Load Instructions

Please note that ceiling fans must be installed only by an **authorized and qualified professional installer**. Improper installation may cause malfunctions, damage or safety risks and void warranty or return claims.

1. Ceiling load capacity

The ceiling must safely support a **minimum load of 20 kg**, including the fan's weight and operational movement.

It is the customer's responsibility to ensure **before ordering and before installation** that the ceiling structure (concrete, wood, plasterboard, etc.) is suitable. Appropriate anchors or fixing systems must be used if required.

2. Electrical connection

A **pre-existing, compliant electrical ceiling connection** is required for the installation.

Missing or unsuitable electrical installations are the customer's responsibility and **do not constitute grounds for returns or claims**.

3. Product inspection

The product may be inspected as in a retail store, but **must not be installed or operated**.

Installation is considered usage and will result in a **deduction for loss of value**, as the item can no longer be sold as new.

4. Disclaimer for structural conditions

Casa Bruno is not responsible for the customer's structural conditions (e.g., ceiling strength, substructure, electrical wiring).

The customer must ensure suitability **prior to purchase**.
